Incorporating data into the classroom is one of the most effective ways to improve instruction and student comprehension. With detailed data, teachers are better equipped to address learning gaps quickly, intervene when students need guidance, and differentiate instruction accordingly. Edgenuity's® learning solutions present data in an easy-to-understand manner, helping educators to review and use the data they have available to them.

**Edgenuity Courseware™ and MyPath™ for Initial Credit, Credit Recovery, and Intervention**

Edgenuity’s LMS gives teachers and administrators access to data that can help ensure student success. Real-time data and reports show student, class, and school performance, so administrators can see a big picture view of program success and teachers can focus on their students’ specific needs.

- Single-student reports show teachers how students performed on lessons, units, and activities. Session Logs show educators how much students are working in the program, and Progress Reports and assignment calendars also provide useful data.
- Group reports show data for multiple students so educators can assess student, faculty, and program success.
  - The Lesson Mastery Report gives educators a customizable view of data on student and class progress. Teachers can view average and individual student assessment scores by topic or standard, helping them to group students for reteaching.
  - The Gradebook allows teachers to review and manage student performance on units, lessons, and activities across an entire course. This makes it easy for educators to quickly see which activities are below the passing threshold or have been bypassed via customization or pretesting.
- Administrators can see data for all of their students using the school and district reports. Available reports include the Recent Action Log, Active Enrollment by Grade Level, and Total Enrollment by Course.
- The Family Portal gives students’ families anytime access to attendance logs and progress reports, and automatic emails can be sent on a regular basis to help keep families informed about their students’ progress.
UpSmart® for Standards Mastery

The detailed, real-time data that UpSmart collects with every student action shows exactly what grade-level skills students have mastered. Using this data, teachers can provide just-in-time, targeted reteaching, helping to ensure students are mastering grade-level skills and are prepared for high-stakes tests.

Data is color-coded, so educators can easily see at a glance where their students are excelling and struggling. Teachers and administrators have access to the following reports:

- Progress by Standard: View progress against grade-level standards.
- Progress by Topic: Monitor student growth in each topic as students advance from level to level.
- Detailed View by Student: Drill down to the single-student view to see specific skills within a standard or topic.

DID YOU KNOW?

Edgenuity’s Professional Development Services offers workshops and targeted support sessions about data and progress monitoring. Attendees will learn more about functionality of the LMS and how to use it to engage in data-driven planning and decision-making. Hybridge® and Pathblazer® for Foundational Elementary Skills

As students work in Hybridge and Pathblazer, data is collected that can be used to track student progress toward standard mastery, inform small-group instruction, and help teachers to plan for one-on-one time with students. Educators have access to many helpful reports including Class Progress Reports, Assignment Status Reports, and Learning Path Status Reports. The Teacher Dashboard also has helpful information for both teachers and students to quickly review including:

- The Student Status Gadget ranks students from low to high over adjustable date ranges. Individual student names are clickable to give more details about student performance on assignments and activities.
- The At a Glance pie chart shows color-coded student progress on assignments. Segments are also clickable so educators can easily access more detail about student performance.

DID YOU KNOW?

Edgenuity partners with NWEA® MAP® Growth™, Renaissance Star 360®, and Scantron® Performance Series® assessments to help provide personalized learning paths in Pathblazer and MyPath. Educators can import trusted student data they already have directly into the LMS, eliminating the need for additional testing.

Edgenuity Help Center

For more information about Edgenuity’s reporting and data and how best to use it, visit our Help Center at help.edgenuity.com. Here, you’ll find detailed information as well as FAQs about accessing and using the data collected as your students complete their assignments and coursework.
