

Ensure Academic Integrity with Edgenuity's® SecureLock Browser Experience

As more students engage with online learning, the need to ensure academic integrity has never been greater. Edgenuity makes this easy to manage with a SecureLock browser experience that leverages a district's existing Active Directory and/or Google Admin setup.

With Edgenuity's SecureLock Browser Experience, you can:

- Prevent students from opening other programs or browser tabs while working on their Edgenuity coursework
- Allow students to access instruction from home, but require them to take assessments at school where they can be proctored

HOW DOES IT WORK?

Your district's or school's IT staff will create a single Edgenuity profile that students must use to access district-owned hardware. This profile is the only way students can access Edgenuity and still allows each student to log in to their own Edgenuity account either via the regular login page or through a district portal or other SSO approach. Once logged in via the Edgenuity policy, however, students will not be able to access any other website or program.

Your IT staff will also enable Edgenuity's IP Registry feature to limit student access to assessments outside of the school network. This allows students to complete work at home and skip over quizzes, tests, and exams; these assessments will instead be automatically presented when the student returns to school. Or, if you prefer, you can block students from accessing Edgenuity at all unless they are on a school network.

HOW DO I GET STARTED?

To get started with Edgenuity's SecureLock Browser Experience, please contact your Account Executive. For self-service instructions on how to implement the SecureLock Browser Experience, IT staff can visit the link below. Please note that this solution should only be implemented by IT staff; it is not designed to be enabled by a teacher or administrator.
