

## California Mathematics Common Core Middle School Series

- California Common Core Mathematics Grade 6
- California Common Core Mathematics Grade 7
- California Common Core Mathematics Grade 8

# It clicks for students

Edgenuity's research-based instructional model meets the rigorous demands of the California Common Core Mathematics Standards. Our courses offer an interactive and personal learning environment with the right level of support for each student.

## Direct instruction

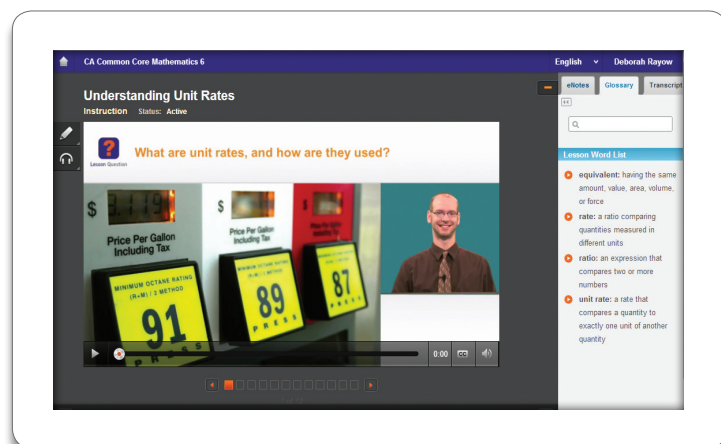

Through engaging instructional videos, Edgenuity's expert teachers provide direct instruction, explain concepts, model strategies, and make real-world connections. Lessons are organized into manageable segments so students work at a pace that's just right for them, pausing and reviewing instruction as needed.

## Meaningful assignments

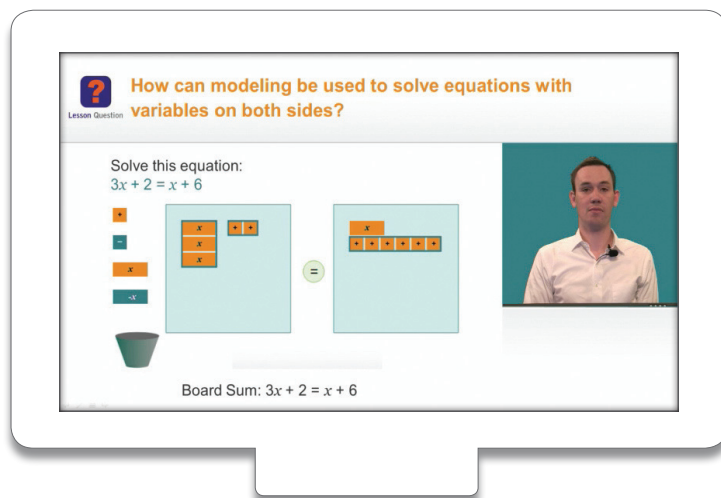

Rich assignments ensure students master concepts, develop procedural fluency, and engage with mathematics in a variety of applications. Students will use virtual manipulatives and simulations to explore mathematics concepts. They will also complete problem sets and performance tasks to practice what they learn.

## Adaptable assessments

Formative and summative assessments test for mastery and provide immediate, actionable feedback for students and teachers. Customizable options support accommodations and modifications as needed. Teachers can give students more time, change the passing thresholds, allow for additional retakes, or adjust grade weights.

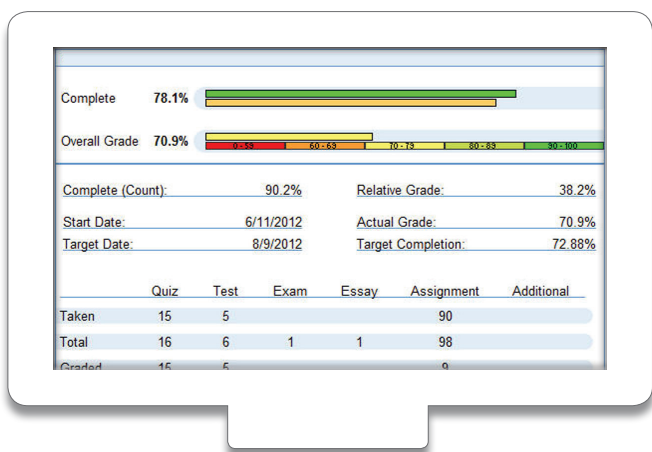

On-screen tools allow students to take digital notes, look up unfamiliar words, and translate text into their home language.

Interactive tools and virtual manipulatives bring mathematics to life and help students build conceptual understanding.

# It clicks for teachers

Edgenuity's award-winning learning management system empowers educators to individualize instruction and meet the needs of all students.

Targeted reports help educators monitor student activity and support success for every child.

## Real-time, actionable data

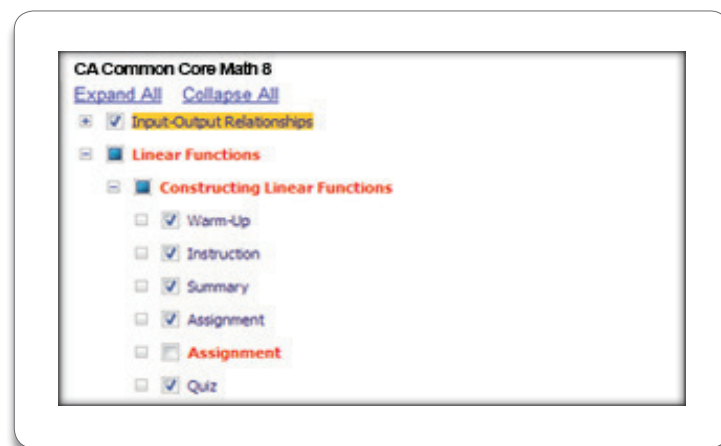

Educators can view individual and class data on student engagement, progress, and achievement. With anytime, anywhere access from a desktop, laptop, or mobile device, educators have an unprecedented window into how their students are performing in each course.

## Customize online instruction

Educators can customize course content at the unit, lesson, or activity level. Assessment automatically adapts to each student's customized learning path, so students are assessed only on content they have actually studied. Teachers can also assign supplemental learning blocks and customize course options for each student.

## Personal feedback

An easy-to-use grading interface allows educators to read and review students' constructed responses and performance tasks. Teachers can access rubrics for scoring and write feedback to students directly in the system. If desired, educators can request that students revise their work based on feedback — capturing the entire revision history for each student.

Educators can customize online courses to match local pacing calendars or to differentiate instruction for individual students.

"Four years ago I was given the opportunity to evaluate and recommend an online company to pilot in our school district. Through this four-year term, our district has forged a strong working relationship with Edgenuity. An integral component to the success of Edgenuity's course development has been the design and rigor coupled with the clarity necessary to effectively connect with students while continuing to comply with divergent state standards."

DAVE ABDALLA

Snowline Virtual School  
Snowline Joint Unified School District, CA

# Solutions that work

Edgenuity is a company of experienced educators who understand the many challenges you face. Together, we will design an online or blended learning program specific to the academic needs of your school or district, ensuring every student can succeed.

## Core Curriculum

Expands curriculum with proven, standards-based courses in English language arts, math, science, social studies, and electives for initial credit.

## Concept and Credit Recovery

Gives students the opportunity to re-engage with school, receive additional instruction, retake courses, and earn credits to graduate on time.

## Instructional Services

Provides certified teachers and online teaching and coaching services to support your program's implementation.

## Career Education

Offers a full suite of career courses including Explorations, Career Planning, and Pathways that prepare students for industry certifications.

## And more...

Edgenuity offers world languages, Advanced Placement®, test preparation, alternative education, and even summer school programs.
